Fall Term

Reports To
The Software Developer intern will report to the development team lead and frequent interactions with the CEO.

Job Overview

A Software Developer's duties will revolve around building software using code, as well as modifying and fixing eros, adapting it to new hardware, improving its performance and upgrading interfaces. Working with other departments and reporting back on issues or design. Keeping the company software updated and maintained.

Primary Responsibilities and Duties

- Design and implement along with managing software for the company
- Running and evaluating new software programs
- Looking for areas that may need modification and improvement and updating them
- Developing solutions for issues that may occur within the system
- Updating and maintaining current software when needed
- Know and have interest in computer systems and the latest technologies
- Working closely with other business & system analysts, all other departments, as well as CEO
- 25-32 hours per week

Qualifications and/or skills acquired through Internship

- Currently studying or a BS/MSs in Computer Science or Computer Software Engineering
- Preferred prior experience with JavaScript, Python or Corvid Coding (this will be learned as part of the internship)
- Excellent Teamwork skills
- Technical Background in software development life-cycle
- Ability to learn company platforms quickly: Jira, Trello, Slack, Wix
- Interest in current computers and technologies
- Good communication skills - written and verbal
- Attention to detail

Submission Requirements

- A letter of recommendation from a professor OR academic counselor
- A copy of current unofficial transcripts
- Writing sample in the form of an introductory letter stating: "How your current skills can contribute to the success of the organization" maximum of 250 words
